

Conservation Storage Box Assembly Instructions

This box requires assembly with glue.

We recommend using our Jade 403 PVA, which is acid-free, permanent, and is fast drying.

When gluing it's essential that all tabs are glued to the **INSIDE** of the wall.
Failure to do so will result in a box that will not close properly.

Tabs are on the inside.

Use clamps or allow the box to dry under weight.

The end result is a box with only visible seams along the corners when closed:

* Base and lid will only fit in one direction. If you have a square box (example: 12" x 12") and the lid does not fit, try rotating the orientation of the lid 90 degrees.
